Key Management as a service

KEY-MASTER Junior series is designed to manage 15 to 26 keys. Thanks to the Android terminal, management (borrowing and returning keys) is very easy. From a distance, the **KEY-MASTER** cloud software allows you to manage the **Junior** from wherever you are. Management via the Android smartphone app is also possible. The Android operating terminal (with 7" touchscreen) communicates via TCP/IP. An unlimited number of control terminals can be connected via this network.

KEY-MASTER is the leading brand in the field of intelligent key management systems. Cooperation with our customers, continuous improvement of products and solutions, give you the assurance of correct identification and security of people, keys and assets.

KEY-MASTER is the leading brand in intelligent key management systems and security systems. We strive to cooperate with more customers and dedicate ourselves to creating outstanding products and solutions for the identification and security of people, keys and assets.

Our Key Management systems are widely used in various industries.

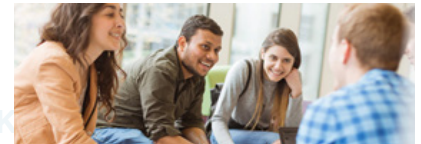

Transport & Automobile

The transport and automotive industries are undergoing the biggest transformation in decades due to a variety of new technologies combined with stricter safety and environmental requirements.

Defence & Security

KEY-MASTER provides support for national security and safety, including intelligent management of army and police facilities and property to prevent unauthorised access to critical facilities.

Education & Research

KEY-MASTER works closely with universities and research institutes to build a smarter campus environment.

Healthcare

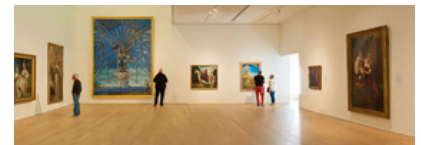

Hospitals are placing increasing emphasis on the safety of essential equipment and drugs.

KEY-MASTER has developed several technical support solutions for healthcare, which meet these high safety requirements while also improving intelligent management and service in hospitals.

Hotel

KEY-MASTER key and asset management system is the ideal addition to enhancing hotel security and transparency. By alleviating administrative burdens, this system aids hotels in enhancing overall security and service quality, boosting hotel revenue, and lowering operational costs.

Public

Public buildings form a significant part of the urban landscape and are often high-traffic locations. Casinos and other entertainment venues, such as theme parks, zoos and playgrounds, need a robust management system to effectively manage people, keys and valuables, with the aim of ensuring the health and safety of visitors.
